

# Andy Walker

Sunday 17th September '89 was a day believers of freedom of speech, and freedom of free radio broadcasting were to gather at the bullring sunken walkway/roundabout at the front of the DTI HQ Waterloo Bridge House in London. The Caroline Movement expected about 1500 supporters to turn up, only 400 did. Those who did bother to travel to London heard and saw members of the CM and Caroline DJ's tell of the events of the 19th August. Things didn't go to plan as with most CM events and the march itself started around 12:30, as we all walked along the South Bank towards Lambeth Pier, with anoraks in police uniforms also showing support which was nice. The planned meeting with the CM's MV Galaxy was not to be, as John "Mega Phone Mouth" Burch told us she had got stuck at Greenwich in an unexpected high tide. A pleasure craft had been hired at the last minute which was to let about 60 people on at a time. The first load of people stayed on board longer than they should have, which meant the rest of the mariners were left waiting for over an hour. When we finally got on board the vessel, the wait wasn't worth it. There were all the usual Caroline jocks standing around drinking, and upstairs a disco unit played rock music with Rob Harrison dee-jaying. I had one pint, looked around and left. The march was the main thing, a show of support against the illegal action of 19th August and if more people had turned up it would have had a bigger impact, those who didn't attend should no longer call themselves free radio supporters. It wasn't asking much, one day of someone's time for 25 years of music is a small price to pay. Myself, Adrian Cooke and the guys from Falcon Radio who I met can hold our heads up and say "we were there" - we bothered to go.

Hi ! August saw the (temporary?) loss of Radio Caroline and since we last met in these pages, two free radio publications, 'The Weekly Report' and 'Radio Telex' are/have ceased publication. As WFRL's Andy Walker said, everything seems to be falling apart at the moment. This now leaves ACTIVITY more or less alone to report the shortwave news and in the last week or so, enquires have been coming in from people asking about the magazine since they're now looking for their SW info elsewhere. Well we're happy to provide it and we feel this magazine is and has been the most comprehensive source of info on the SW scene. Some questions are being asked, will ACTIVITY cover other aspects of free radio? No, because we feel that it's best to give 'quality than quantity', it's up to someone else to provide the other news and to be honest, the more free radio publications there are the better. Changing the subject, the 'Pirate Pages' (the US free radio news-sheet) indeed now have a new address after a house move, it is: 'PiPa', PO Box 628, Slanesville, WV 25444, United States. 2 IRC's will get you a sample.

## Propagation News Roger Davis

Propagation report for October: Conditions during September remained mostly good with strong signals and shallow fades, during October we can expect the continuation of good signals on 6 and 7 MHz. Other frequencies that should become active are 28, 24, 21 and 18 MHz with the best times being noted 08:00 and 18:00. If any shortwave free radio stations use these frequencies some very good long distance reception can be expected during October onwards. Not too much to report this month, so the rating for October is very good.

### ACTIVITY INFO

ACTIVITY is compiled and published each month and reports on the short wave free radio scene, where ever it might be taking place. All comments, suggestions, enquires can be sent to..... ACTIVITY MAGAZINE, 3 GREENWAY, HAROLD PARK, ROMFORD, ESSEX, RM3 0HH, GREAT BRITAIN.

ALL TIMES ARE BST !

# STATION NEWS

## THE SHORT WAVE STATIONS (September 1989)

GREAT BRITAIN Britain Radio Int'l made their two scheduled appearances in September (10th and 24th) on 6230. A change in programme schedule was noted this past Sunday at 12:45, with the 'Rock Mailbag' being heard. The 'BRI Radio File' (4th Sun 12:00 onwards) may well be in print form soon, depending on demand.

Radio Confusion Int'l were active on the 3rd with two separate transmissions, around midday on 6308 and later on after Orion had switched off, RCI were on 6298. The station's next broadcast will be either a Friday or Saturday, around 23:00 or 00:00. They also have plans to test to North America this winter.

Radio East Coast Commercial continue to be heard from 11:00 to 14:00 on 6815 regularly but the 26m outlet has not been heard in the month. The 'DX Programme' is still aired each 1st Sunday although the SW news is never very detailed. RECC, PO Box 5, Hunstanton, Norfolk, PE36 5AU.

Falcon Radio are still running their Suns 06:00 to 09:00 schedule as far as we can make out on 6870, they were noted with oldies at the start of the month but the station's policy is to play rock music. They may have been behind a unid this past Saturday as well. MAC, PO Box 109, Northampton, England.

Radio Freedom Int'l made a couple of "test transmissions" in the month (3rd and 24th) on 6205, presumably in preparation for a regular service. This past Sunday's test was rather lengthy, about 2 or 3 hours with a wide range of music and some announcements asking for reception reports to be sent to RFI, 67 Elm Road, Edinburgh, EH7 4AQ. The station were re-activated this year (in test mode so far) in April. However, Freedom's very first broadcasts date back to the Spring of 1984.

Freesound Radio insist on using 6266 for their last Sunday of the month broadcasts despite the constant threat of severe utility interference on that frequency. Not the best of channels! This past Sunday saw severe QRM at 11:07 but they seemed to be okay later on and were providing good reception.

THE FOLLOWING CONFIRMS YOUR RECEPTION OF FREESOUND RADIO.

Date of reception 13/11/88. ,  
Time of reception 16.00 to 17.00 GMT.,  
Frequency 6266KHZ ,  
SINPO \_\_\_\_\_ ,  
Receiver used \_\_\_\_\_ ,  
Station received by Pete ,  
Reception confirmed by Mark .

Radio 48 should be on the air again any Sunday now and are also thought to be planning tests to North America this winter. Regular frequency is 6280 and usual host is Mark Stafford from Atlanta Radio (Where are they?).

Radio Gloria are one of those stations who seem to be in continuous test mode and were heard here in September on 6315 with yet more tests (17th and 24th). As was said last month, the problems appear to be with the location since WMR tested the tx in August with fine results. Gloria, 23 South Beechwood, Edinburgh, EH12 5YR, Scotland.

Radio Orion have been heard each Sunday with programmes from Rod Lucas and Paul Johnson being noted, along with relays for 'GRQ Hard Rockin' with Mark Tyme. Mike Wilson returned this past Sunday with the station's mailbag show, the reason for his absence from the airwaves was simply that he wanted a break after doing a show week-in, week-out, for the past  $3\frac{1}{2}$  years! 25 MHz has been dropped for the moment due to lack of response but it may be back at

Christmas. The 48m tx used for the last month or so has been the 20 watt version, so presumably the 55 watt tx has taken a break as well. Orion are not being heard on Sats so much recently and we understand this too is due to lack of response and that the Saturday broadcasts could even be scrapped. So if you listen... Orion, PO Box 1280, Rednall, Birmingham, B45 8SG, England.

RFM Shortwave continue to be heard sometimes on 6317, something that does not please Radio Stella, who are just 2 KHz above. RFM carried their FM service on the 3rd and short wave service on the 17th. Tx power is thought to be about 10 watts but it's been said this could be increased up to 80 watts soon.

Total Control Radio were inactive for September but plan to be back on a Saturday night very soon, a new antenna has been constructed and should improve overall reception. The new aerial will be outside and mounted at possibly 20 feet. Previously TCR had mostly used an indoor antenna. Operator Steve Collins says they might just be a night time station in the future. TCR, BP 130, 92504 Rueil Cedex, France, is the contact address.

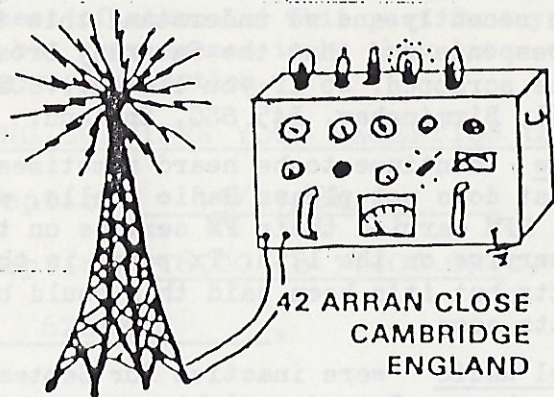

UK-GM were recently re-activated after several years off the air and we're now told the transmitter was actually running at 100 watts. They intend to be back but you'll probably have to wait since their plans are to be on at Christmas. Steve West mentioned something about the station attempting to re-create the sound of one of the most popular outfits of the past, European Music Radio.

Weekend Music Radio have ploughed their way through an interesting month... It all started on the 3rd or 10th (not sure now!) when Alan Hays (Radio Gloria) and Bill (DX-20) visited Jack in Scotland. This duly led to four transmitters being put on the air all at the same time, on 6235, 6309, 13720 and 15043. Early Sunday 24th saw WMR being heard with a "live" broadcast from 01:11 until close at 03:00, used here were 6310-to 6240 later and 15043 with Jack commenting that conditions were "wide open". Worldwide listener's letters were read out along with much chat and some music. Both the 48m channels

# WEEKEND MUSIC RADIO

## SHORT WAVE

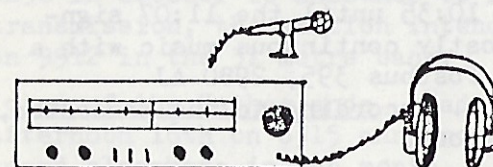

WMR (Scotland): 15043, 1/6, 0400-0415. Rock, Scottish folk mx & M DJ. DX pgm w/much Europirate nx. Weak, but Gd copy—well hrd over US (Zeller,OH) SAME Hrd PiPa names: Connor, Field, Blight, Zeller & Me + many familiar Fine Tuning ones. Gd sig (AY) SAME Mx & M DJ. Got Add. FINALLY! Ment our AY (Grace,MA) SAME Mx & tx w/much abt NA DXers & ment their names. A tape, since same pgm repeated several times. (Rogovich,VA) SAME SIO:333 1 hour tape. Jack Russell w/mx & Letter Box. Ment many familiar names. Sed running 80 w (Connor,PA) SAME SIO:444 Scottish folk mx, extensive reports relayed, Ment BF add, had echo IDs (Sachs,IL)

suffered from some utility interference. Shortly before closedown, WMR signed off with the Scottish national anthem! We were very surprised with what came up on 6240 once WMR had closed - see later. Lastly, Jack mentioned that he planned to activate WMR on the top end of the 17 and 21 MHz bands this winter. These 'World Service' are amazingly successful!

Wonderful Free Radio London made their two scheduled broadcasts in September (3rd and 10th), plus this last Saturday they were active on their usual frequency of 6275 from 10:00 to past 13:00 with presenters Dave the Rave, Adrian Cooke, Andy Walker and Confusion's Steve Midnight. All in all, this was a most entertaining three hours but the modulation still sounded a little low although the signal was very good. WFRL also had some additional problems with the tx going off every so often and also some strange noises, but these were only minor problems and didn't really spoil the broadcast.

THE CONTINENT Radio Action were heard on the 13th August on 6207 with a good, strong signal. This is the first Sunday broadcast from the station as far as we know (active Sats in the past) and they were on for about four hours before signing off at 12:23. The previous week, the oddly named Radio Heideroosje were relayed. Add for Radio Action: Postbus 26, 7030 AA Wehl, Holland.

# FREE RADIO IS GOOD RADIO

Clandestine Listeners Club Germany received 9 letters for their relay broadcast in July, apart from our own letter, there were a further 4 each from West and East Germany. They are hoping to be on the air again in October over 7490 but this will depend on whether the relayer wants to put them out. If he does, CLCG plan 2 hours of programme with 'CLCG Int'l' and a show in German. The station now have a new address, contact them at CLCG, PO Box 540 101, D-4100 Duisburg 54, W. Germany.

Radio Caldonia Reports are flying about (or should we say rumours?) that this station are set to return to the airwaves. RT 158 mentions a night time broadcast planned for 6315 around 22:00. Remember them when they used to be the sister station to Radio Aquarius on 41 metres?

Radio East Coast Holland were heard briefly this past Sunday on 6242 and quickly made a CQ call, RECH have a tx for sale although we couldn't make out if it was 20 or 200 watts but knowing our Dutch friends it's probably the latter! RECH, Postbus 536, 7900 AM Hoogeveen, Holland.

Radio Europe are thought to have plans to increase power to 500 watts soon to improve reception in Northern Europe. The Italian station has so far used 40 watts for it's transmissions on 7294 and 27827 (used at separate times). One to watch out for if the plan goes ahead.

Radio Joystick has resumed it's service recently after a long break, 27th August had them on 7440 via RWI with chart-based dance music such as De La Soul, Tone Loc and Chaka Khan.

RADIO JOYSTICK  
- Charlie Prince -  
Funky Sounds For Central Europe  
Post Office Box 22 03 42  
D - 5600 Wuppertal 22  
Fight For Funky Radio !

This past Sunday, Joystick were heard via Orion on 6300 with presumably more of the same music wise. There was some English speech in this latter broadcast, in contrast to all German back in August.

KBC Radio returned to the airwaves on 27th August on 7313 after a lengthy absence, probably because Tom de Witt has been busy with the 'WMR Goes DX' programme on World Mission Radio until the Ross Revenge was boarded by the authorities in mid-August. The previously used add is still in use by the station.

Radio Normaal were heard with a "test transmission" on the 17th on 6276, noted from 10:35 until the 11:07 sign-off. The test consisted of mostly continuous music with a few announcements, an add of Postbus 395, 2980 AJ Ridderkerk, Holland, was given. According to the presenter, the station hopes to be back soon.

Radio Orang Utan The 'monkey' was heard testing Sat 9th at 15:57 on 6205 and programmed the following day on the same frequency. Following a letter to the station, we got a reply from operator Freddy after 41 days.

Passion Radio were noted with a good signal on Sat night 2nd on 6233 playing dance music, the station may be new but the well known German presenter is certainly not! The station appears to be capable of producing both 10 and 50 watt outputs. No mailing address is known.

Pirate Freaks Broadcasting Service are sometimes active weekend nights especially Fridays, usually on 6235, the programmes are quite good or so we're told. Letters can go to: PFBS, Postbus 19074, 3501 DB Utrecht, Holland.

Rainbow Radio Germany were heard overnight 9th/10th with a broadcast that was announced as for Central Europe and Northern Africa. Fair reception was noted for the station's 'Night Attack' programme. The previous Sunday (3rd) we were surprised to hear the RRG tx during the day,

this time with a relay for Radio California Int'l, part of the German Free Radio Corporation. Back to nights, and it's worth checking the band weekend nights for Rainbow as they seem to be part of the regular night-timers. The frequency they're broadcasting on? 6314 KHz.

Radio Tonair were active on 20th August using 6206 with pop music slanted towards the dance side of things I.E. Paula Abdul, Tone Loc, Soul to Soul, Womack and Womack etc. The signal was mostly good. Contact is via Postbus 21, 7010 AA Gaanderen, Holland.

Radio Tower celebrated their 1st anniversary with a broadcast on the 10th using 6238, a competition was held with the winner being the writer of the best reception report, they'll receive a copy of "25 years of Radio Caroline memories" by Hans Knot. Tower will be back on 6238 in October to announce to results. After this transmission, the station intends to broadcast regularly on 9912 in the 31 metre band.

Voice of the Netherlands made an appearance on Sat afternoon 16th on 6315 announcing 200 watts but were not heard elsewhere in the month.

Radio Waves Int'l are still heard regularly on 7440 and are getting through with fair/good signals here. The 'Pirate Memories' programme was noted on the 17th at 11:09, so maybe something to look out for there. Relays continue to be heard over the RWI tx, Radio Ga Ga Int'l (tentative), Radio Starline and Jolly Roger Radio have all been noted during September.

Radio Wahnsinn were heard early on the 3rd on 41 metres using 7410, the reception was extremely good and the conditions at that time of morning (station heard 09:11 until 09:39 close) were very favourable on 7 MHz. This

transmission was presumably via the station's own tx, in the past they have been relayed by Radio Waves Int'l, but we can't think of any stations who use 7410 and therefore be the relayers of Wahnsinn. Music format was rock based with tracks from Elton John, Supertramp, David Bowie etc and the speech was all in German. By the way, the word "wahnsinn" is German for insanity! Contact via Box 220342, D-5600 Wuppertal 22, West Germany.

Radio Titanic Int'l were heard on both the 13th and 20th August on 6240 and were relayed via Weekend Music Radio. Programmes included a Dave Scott show but we're told these were made some time ago and don't indicate a possible return of Radio Apollo Int'l! Titanic appears to be second only to Radio Gemini in years on the air, having started back in 1974.

Radio 101 are sometimes active on 15015 with 50 watts and have reached Scandinavia. Listen out!

IRELAND (Republic and Northern) Jolly Roger Radio keep up their presence on the dial, you can usually hear them Friday or Saturday nights and Sunday mornings, and sometimes on Saturday mornings also. Reception is very much improving here for this station on their nominal 6229 channel. The night time broadcasts have apparently been quite successful with some 30 to 40 letters having arrived at the mailing address which is: JRR, PO Box 39, Waterford, Republic of Ireland.

Northern Ireland Shortwave Relay Service are heard sometimes on 6273 and even went on into the evening on one Sunday during the month. Not many relays are being carried at the moment it seems, maybe potential users are not yet convinced of the station's efficiency.

Ozone Radio Int'l continue to be noted on 6820 often with Prince Terry playing rock music and talking about the environment as well. It's surprising to see an experienced operator like the Prince often sitting a little too close to RECC (6815) for comfort, often resulting in a hetrodyne between the two. Perhaps Ozone should operate outside of RECC hours to avoid these problems. Ozone, 32 Victoria Rd, Salisbury, Wiltshire.

Radio Dublin appear to be inactive on shortwave as they have not been heard for a couple of months. In late July the station were a tentative log in the United States...

R.Dublin(tent): 6911, 7/30, 0310-0601. Listened on & diff. Block of Bon Jovi @0600. Hrd no IDs; sounds like their format. P/F sig (Field,PA) Yow! Activity Zine sez RD is 40 w!

MISCELLANEOUS Scottish Free Radio Service have had some success with long distance reception recently, according to WMR the other night, a professor at Memorial University, St John's (home of legendary MW station CJYQ - the city that is) in Newfoundland heard Radio Stella Int'l at 04:22 on 6319 early on 20th August. So obviously the propagation conditions for this type of DXing are going to be quite favourable this winter.

Super Station seems to be the actual name for this new project which will feature a number of well known free radio people. The very first broadcast is expected to take place this coming month at some point.

WABC continue to be heard at times on 6319, presumably via the SFRS, there seems to be no set time or day to hear WABC as logs for September were: Wed 13th at 21:12, Fri 15th at 19:55 and Sat 16th at 12:00. + Sat 9th 08:11.

MYSTERIES A few of these in the month... Sun 3rd on 7429 at 09:39 - presumably Radio Universum as they were logged in RT, an excellent signal here anyway... Early Thur 7th on 6210 heard 00:05 'till sign off at 00:15, the station was playing Mai Tai's 'History' - we think this was DX-20 since he's played this track at other times... Sat 23rd on 6870 at 13:30 - Falcon Radio?... Early Sun 24th on 6236 at 00:18 - VOTN Radio?

CLANDESTINE Something very interesting happened after Weekend Music Radio closed for the night early Sun 24th at 03:00, we could hear some slight QRM just before Jack went off and this turned out to be the Central American clandestine Radio Venceramos, on 6239 (frequency drifted). We listened from 03:00 to 03:30 with fair reception, with talk and Latin American music being the output. The station is one of the world's most famous clandestine stations and it uses its own equipment (not relayed by a friendly country) making it very much like a free radio

station. The station is the voice of the FMLN (Farabundo Marti National Liberation Front) and is operated by the People's Revolutionary Army from a site thought to be inside El Salvador, the target country.

### NORTH AMERICAN FREE RADIO NEWS

US 'pirate' heard in Europe! Late on Saturday 23rd, the American FR station, The Voice of Tomorrow were heard in Europe on 15040 and were noted with sign off at 01:05. They were heard by WMR's Jack Russell in Scotland who commented that they were "making it to Europe easily" with fair signals. An Oregon maildrop was given. This is the first American FR station to be heard in Europe for several years: In October 1980, Radio Confusion made it over the Atlantic Ocean on 13983 and there have been others as well, such as Radio Xenon and the Voice of Syncom, probably others as well.

ANT 1/4 wave 620'  
Issued by QTH (03)

On 5th September, Samarai Radio are thought to have made a test to Europe on in-band 15200 but not heard here. WKND hope to test between 15050 and 15150 soon and KNBS are reported to have constructed an antenna for 19m in August for use on either 15014 or 15084

between 17:00 and 21:00. But there's no further news about WJDI who were going to be on 15 MHz with 1.5 KW! It would seem we have not heard the last of the American free radio stations in Europe!

Stateside on 7 MHz now and Zodiac Radio were being reported nightly in Nevada back in August, playing 70's rock such as Led Zep, Doobies and the Who. Radio USA (relayed by WFRL a while back) were active mid-August and announced that their transmissions were coming "from a

leaky bathtub". United World Radio have been on 48 metres (6280) with 60's protest music and 'DX Report' programme.

Some news about the US-based clandestine La Voz de Alpha 66: Apparently this anti-Castro station who were raided a while back broadcast from a mobile van in Florida. Either the FCC are really good detectors or the van story is not true! Maybe it was in a 'fixed' position at the time? There are plans to bring the station back, presumably on it's usual 6666 KHz frequency.

## *Talkback*

"The whole thing could have been neatly avoided had the Caroline organisation listened to WMR's Chris Cortez many months ago about the obvious danger to using 6215. It is well known that the frequency of 6215.5 is an international calling frequency, and a supplementary worldwide distress and calling frequency. 6218.5 worldwide coast and ship station's simplex frequency, and 6221.6 the same as 6218.6. So that is without a doubt the reason they were raided. Anyone that has the use of a SW transmitter should know or when told respect those freqs. Also stations on 6281.5 and 6282 are both worldwide ship distress and safety freqs, but I assume for narrow band stuff like RTTY and CW, as you never hear SSB traffic there" wrote Jack Russell of Weekend Music Radio.

"Maybe the whole situation of Free Radio on shortwave is rather disappointing to many people, i.e. they can't hear a lot that is interesting enough to keep them tuned in or the signals are too weak for proper reception. Especially UK stations are very difficult to get at my location, hearing Weekend Music Radio with O/2 was an excellent catch a few weeks ago. The other week, however, I could'nt even ID Radio Gemini on the same channel as they were just too weak to keep listening for more than five minutes! It's true that many stations have complained about very little response from UK DXers to their broadcasts, again this seems to be some sort of mystery to me as I believe there are people listening but perhaps they've all become too lazy to write. About 10% of RT

subscribers are British which is not a lot, I think since lately there are more readers to RT in France than in the whole UK" comments Bjoern of Radio Telex.

Mark Stafford of Atlanta Radio had this to say "We got a fairly good response to the broadcast (10th b'day) with 32 letters in all being received, you may be interested in some statistics which show the current state of the UK short wave scene. If you compare our 32 letters for that broadcast with the response to our 5th birthday broadcast in 1984 you will see that there has been a dramatic drop in listener response. Our 5th birthday broadcast got us around 90 letters even though we had been on the air only 4 weeks before. If you add to this the fact that in January 1989 we were using two transmitters it's not good news. All in all as an "old-timer" on short wave I have to say things aren't what they used to be listener-wise!! During the early 80's when we were running a regular monthly service we used to say that 30 letters was an average mailbag, 40 to 50 was good and anything less than 20 was a disaster!! These days we say anything more than 20 is excellent!! Our average mailbag is around 20 letters depending on how long it is since the last broadcast. Special occasions like using two transmitters bring in a few more. There are quite a few UK stations who get excited if they get more than 10 letters for a broadcast and very often only get 4 or 5 letters".

David Williams wrote to us with the following "For many years now I have been sending off many reception reports to the free radio stations on the shortwave so I think it would be a good idea if some of these stations gave a prize of some sort for the listener who has sent in the most reports to a station over the years, I wonder if I qualify for this, after all my name must be well known over the airwaves of 48 metres on a Sunday".

"It's nice to see an all shortwave mag being produced as that's what I'm most interested in (have been interested in 48 metres pirates since 1980)" wrote DX-20.
